Vision document

The purpose of this project is to develop a software for a digital library.

There are many reasons why one might want digital libraries. They might make research easier for students, teachers and librarians. They might ease the budget pressures on libraries. But perhaps their most important advantage would be their ability to help society, to make information more available, raise its quality, and increase its diversity.

This software is mainly intended for librarians at public and private libraries. Students and teachers may also use the system if they want to create their own library.

System users may be able to add, modify, and delete books.
